

Project 1022763

**Using a Consensus Conference to Characterize Regulatory Concerns Regarding Bioremediation of Radionuclides and Heavy Metals in Mixed Wastes at DOE Sites**

**Lach, Denise**  
Oregon State University

**RESULTS TO DATE:** We have spent this first part of the project preparing background material for conference participants and making arrangements for the conference itself. Material regarding state regulatory constraints to the use of bioremediation in the cleanup of radionuclides and heavy metals at DOE sites around the country has been added to the Bioremediation Briefing paper for participants. The Steering Committee has been formulated and will hold their first meeting via phone conference on Monday, September 13, 2005. On the agenda is identification of conference participants, experts, and initial issues likely to be addressed. Human Subjects approval has been secured from the University. The "pre-test" has been developed and is ready to implement. The Consensus Conference will be held in Phoenix, AZ during January and February 2005; we are working with the Chamber of Commerce to find an appropriate site.
